## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Perovskite Photovoltaic Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Perovskite photovoltaic equipment is a solar cell manufacturing equipment with perovskite material (ABX<sub>3</sub> type crystal structure) as the core light-absorbing layer, covering coating, coating, laser etching, packaging and other links. Among them, coating and coating equipment are the core equipment for perovskite battery production. Coating equipment: PVD (physical vapor deposition) and RPD (reactive plasma coating) are used to prepare electron transport layers and hole transport layers. Coating equipment: Slit coaters are used for perovskite layer preparation and are key equipment for mass production. Laser equipment: used for laser scribing (P1-P4) to achieve sub-battery series connection. China's policy support: On September 27, 2023, the National Energy Administration mainly supports the application of new, advanced and efficient photovoltaic cell technologies such as high-efficiency photovoltaic cells, perovskite and stacked solar cells, new flexible solar cells and modules, promotes the entry of cutting-edge technologies and equipment into the application market on a large scale, and continuously promotes the advancement of photovoltaic power generation technology and industrial upgrading. On March 15, 2024, the National Development and Reform Commission and the Ministry of Housing and Urban-Rural Development support the application of thin-film battery technology equipment such as perovskite and cadmium telluride in the construction field, and promotes the integrated application of reliable technology processes and product equipment.
