Abstracts

The Pelling-Broca prism is a fixed deflection dispersion prism similar to the Abbe prism, with specific geometric shapes and optical properties. It is usually shaped into a square with 4 planes, with the correct angles of the sides being 90°, 75°, 135°, and 60°, respectively. Light is incident from one of the planes, and after internal reflection, it is emitted from the other plane at a specific angle. This prism can selectively deflect specific wavelengths of light, so that different wavelengths of light are deflected differently when leaving the prism. With the continuous development of optical technology and the continuous expansion of its applications, the market demand for Pelling-Broca prisms is growing steadily. Especially in the fields of laser technology, spectral analysis, optical communications and medical cosmetology, Pelling-Broca prisms have broad application prospects and huge market potential. As an important optical component, Pelling-Broca prisms have a wide range of applications and important value in many fields. With the continuous advancement of technology and the continuous expansion of the market, its market scale and influence will also expand further.
