Abstracts

A Personal GPS Locator is a device that uses Global Positioning System (GPS) technology to track and locate the position of an individual. It is typically a small, portable device that can be carried or attached to a person's belongings such as a keychain, backpack, or clothing. Personal GPS Locators are commonly used for various purposes, including personal safety, tracking the location of children or elderly family members, monitoring the whereabouts of pets, and keeping track of valuable items. They usually have features such as real-time tracking, geofencing (setting up virtual boundaries and receiving alerts when the person or object moves outside of those boundaries), SOS buttons for emergency situations, and mobile apps or web interfaces for monitoring and managing the device. These devices often rely on cellular networks to transmit location data, so they require a SIM card and a subscription plan with a service provider. Some Personal GPS Locators also offer additional features like two-way communication, historical location tracking, and integration with other smart devices or platforms.

The global Personal GPS Locator market size was estimated at USD 6433.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
