## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Personal Handheld Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A personal handheld camera is a miniaturized imaging device that has computing and processing capabilities and can be used handheld. It integrates traditional image capture functions with computer technology, data processing technology, sensor technology, network communication technology, and power electronics technology. It can shoot high-quality still images or dynamic videos, and supports intelligent processing, storage, and sharing. In 2024, global personal handheld camera production reached approximately 52.32 M units, with an average global market price of around US\$ 103.45 per unit. In the future, the personal handheld camera industry will develop in three directions: technological intelligence and sophistication, market segment diversification, and independent innovation. With the maturity of AI and computational photography technologies, devices will integrate more intelligent features, transitioning towards professionalism and high-end design to meet consumer demand for high-quality images. Driven by short videos, self-media, and the livestreaming economy, demand in niche markets such as panoramic cameras and action cameras continues to grow, expanding into emerging scenarios such as virtual reality, augmented reality, and education. At the same time, the Chinese market will accelerate domestic substitution and independent R&D of core components, reducing reliance on overseas supply chains and enhancing international competitiveness.

The global Personal Handheld Camera market size was estimated at USD 5412.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
