Abstracts

Pervious Pavement is a specific type of pavement with a high porosity that allows rainwater to pass through it into the ground below. Pervious pavement is made of either pervious asphalt or pervious concrete. Both materials resemble conventional asphalt and concrete, but have more air spaces that allow water to pass through the pavement into a reservoir base of crushed aggregate, then infiltrate into the ground. Pervious pavement is designed to accept precipitation only and is typically thicker than traditional concrete to support the same loads. This report focuses on the Pervious Pavement materials.

The global Pervious Pavement market size was estimated at USD 12510.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Pervious Pavement market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
