Abstracts

Pesticide intermediates are chemical compounds or substances that serve as building blocks or precursors in the synthesis of active ingredients used in the formulation of pesticides, including herbicides, insecticides, fungicides, and rodenticides; these intermediates are typically produced through multi-stage chemical processes and undergo further reactions or modifications before becoming the final active components of pesticide products, playing a critical role in determining the efficacy, stability, and environmental impact of the end-use agrochemicals. The market for pesticide intermediates is driven by factors such as global agricultural output demands, pest resistance management, regulatory frameworks governing chemical usage, and innovations in sustainable and bio-based alternatives, with key regional demand concentrated in major agricultural economies and manufacturing hubs, while also facing challenges related to environmental regulations, supply chain volatility, and shifting consumer preferences toward reduced chemical inputs in farming.
