Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pet Antiemetics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pet antiemetics are veterinary prescription drugs used to control vomiting and nausea in companion animals, primarily dogs and cats. These medications are commonly indicated for gastrointestinal disorders, motion sickness, renal insufficiency, pancreatitis, poisoning, or chemotherapy-induced emesis. Based on their mechanisms of action, pet antiemetics include neurokinin-1 (NK1) receptor antagonists (e.g., maropitant), dopamine receptor antagonists (e.g., metoclopramide), serotonin 5-HT₃ receptor antagonists (e.g., ondansetron), antihistamines (e.g., diphenhydramine/promethazine), and anticholinergics (e.g., atropine). Among them, maropitant is widely regarded as the most effective and broadly used antiemetic due to its central and peripheral blockade of substance P, a key neurotransmitter in the vomiting reflex. These medications are available in both oral tablet and injectable forms, offering flexibility in clinical use. With proven safety and efficacy, several formulations such as Zoetis' Cerenia are approved across major global markets and have become standard therapies in veterinary internal medicine, surgical prep, and emergency care.

The global Pet Antiemetics market size was estimated at USD 598.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
