Abstracts

The PET bottle flake granulation line is a recycling system specifically designed for waste pet bottles, involving sorting, crushing, washing, dewatering, drying, and pelletizing. During sorting, caps (often pp/hdpe) and pvc labels are removed manually or mechanically to prevent impurities from affecting recycled material quality. Crushing uses wear-resistant alloy steel blades for efficient shredding. Washing removes oil stains and debris via hot water, detergent, and rinsing, with wastewater treated and recycled. Dewatered pet flakes undergo pre-crystallization and high-temperature drying to eliminate moisture and raise melting points. Pelletizing uses screw extruders to melt pet at around 265° into strands, which are then cooled and cut into pellets. This line processes contaminated bottles with oil and labels, producing high-transparency, low-impurity recycled pet pellets for applications in chemical fibers and fillers. For example, an eco-friendly equipment's budget-friendly line achieves annual capacities up to 10,000 tons with low energy consumption and compact design.

The global PET Bottle Flake Granulation Line market size was estimated at USD 2337.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
