Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pet Placemat competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of pet placemat was approximately 300-600 million units, with an average selling price of approximately US\$3-30 per mat and a gross profit margin of approximately 45%. Single-line production capacity was approximately 2-8 million units per year. Pet food mats are functional mats used to catch food, saliva, and water spilled by pets while eating and drinking, providing anti-slip properties, protecting the floor, and facilitating cleaning. The upstream of the pet food mat industry mainly consists of the petrochemical sector, which provides raw materials such as silicone, TPU, PVC plastic granules, and waterproof fabrics. The midstream involves manufacturing and design, with mold factories, injection molding plants, and assembly plants processing raw materials into finished products. The core aspects lie in the waterproof and anti-slip functional design and large-scale injection molding production capabilities. Downstream, the mats ultimately reach consumers through online e-commerce platforms and offline channels such as pet stores and supermarkets. The demand for these products stems primarily from modern pet owners' pursuit of a clean and efficient home environment. The core driving force is to solve the problem of food spills and drool overflows on the floor when pets are eating and drinking. These protective mats help maintain the cleanliness and hygiene of the feeding area and protect the floor from scratches and water stains. They are practical daily consumables for pet-owning families.

The global Pet Placemat market size was estimated at USD 6750.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
