Abstracts

Pet sitting software is a digital tool developed for pet owners, pet service agencies, and professional caregivers. It aims to improve the convenience, scientific approach, and emotional connection of pet ownership by enabling functions such as pet health management, remote care, service booking, behavior recording, and social interaction through mobile applications or platforms. Currently, the pet care software market is experiencing rapid growth, benefiting from the continued expansion of the global pet economy, the deepening trend of pet ownership in families, and the significant increase in pet owners' demand for scientific and convenient care. As younger generations become the main pet owners, they are more inclined to use digital tools to manage their pets' health records, vaccination reminders, daily care, and service appointments. Simultaneously, the widespread adoption of smart hardware provides software with abundant data interfaces, accelerating the formation of an integrated hardware and software ecosystem. Furthermore, the scarcity of pet medical resources, the maturity of local life service platforms, and increased user willingness to pay have further catalyzed the implementation of high-value-added functions such as online consultations, in-home services, and behavioral analysis.

The global Pet Sitting Software market size was estimated at USD 142.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
