Abstracts

Pet Spaying and Neutering refers to pet sterilization surgery, which aims to prevent pets from reproducing by removing their reproductive organs (such as the ovaries and uterus in females and the testicles in males). This surgery not only helps control the number of stray animals, but also improves the health and behavioral problems of pets, such as reducing the risk of reproductive system diseases, reducing aggressive behavior and the tendency to mark territory. Sterilization surgery is usually a safe operation performed by veterinarians under anesthesia, and with the advancement of medical technology, the recovery period and risk of complications of the surgery are gradually reduced. For most pet owners, sterilization surgery is an important health management choice that helps extend the life of pets and improve the quality of life.

The global Pet Spaying and Neutering market size was estimated at USD 1811.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
