## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PET Stretch Blow Molding Machine Integrated with Filling Line competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of PET Stretch Blow Molding Machines Integrated with Filling Lines reached 2,443 units, with an average selling price of US\$21,500 per unit. The PET Stretch Blow Molding Machine Integrated with Filling Line is a highly automated continuous production system designed for the forming, filling, and subsequent packaging of polyethylene terephthalate (PET) bottles. By integrating stretch blow molding (SBM) technology with liquid filling processes, this equipment seamlessly integrates the entire process from heating PET preforms, biaxial stretch blow molding into hollow containers, to metered filling of liquid products (such as beverages, cooking oil, and daily chemical products) on a single production line. The system typically includes a preform heating unit, a stretch-blow molding module, a filling valve assembly, a capping device, and a conveyor control system. It utilizes servo drives and PLC integrated control to ensure molding accuracy, consistent filling volumes, and production efficiency. It also meets food safety standards through aseptic filling design and CIP/SIP compatibility. The upstream is precision mechanical components and automation control systems (including heating modules, high-pressure air systems, PLC controllers, servo motors, etc.), with representative companies including Siemens and Bosch Rexroth; the midstream is the manufacturing of integrated filling lines for PET stretch blow molding machines, involving integrated blowing and filling process development, multi-station synchronous control technology and modular design. Representative companies include Akei and Guangzhou Zhongyan Precision Machinery Co., Ltd. Their equipment improves production efficiency through the

separation of drying tunnel and bottle blowing, and realizes the integrated operation of bottle preform forming, filling and capping; downstream applications are concentrated in beverage packaging (such as mineral water and carbonated beverage bottles), daily chemical containers (such as toiletries bottles) and food packaging, which have strict requirements on the equipment's production capacity stability, filling accuracy and aseptic processing.

The global PET Stretch Blow Molding Machine Integrated with Filling Line market size was estimated at USD 52.52 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
