Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PET Welded Geogrid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PET welded geogrid is a geosynthetic material made of polyester (PET) material, which forms a mesh structure through mechanical stretching and ultrasonic welding. It is used in civil engineering such as soil reinforcement, slope protection, and roadbed stability. It has high tensile strength, low fracture elongation, excellent temperature resistance and corrosion resistance, and can increase friction with soil by pressing rough patterns. In 2024, global PET Welded Geogrid production reached approximately 1023 M Sq m, with an average global market price of around US\$ 1268 per K Sq m. The production capacity of a single production line is 2 million square meters, and the gross profit margin is about 30%. Upstream raw materials: polyester (PET) chips/resin, recycled PET material, anti-hydrolysis agent, anti-UV agent, color masterbatch, etc. Downstream applications Highway/railway construction: Soft foundation treatment, roadbed reinforcement, and prevention of reflective cracks. This is the largest application market. Water conservancy projects: dam reinforcement, river regulation, reservoir slope protection. Municipal engineering: foundation treatment for landfills, sewage treatment plants, airports, ports, etc. Environmental geotechnical engineering: slope protection, mine greening, tailings pond management. Direct material costs account for 65%-75%; labor costs account for 3%-5%; manufacturing expenses account for 20%-30%.

The global PET Welded Geogrid market size was estimated at USD 1297.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
