Abstracts

Petlier Solid State Heat Pumps is an electrically driven, solid-state heat pump using the Peltier effect: Heat is absorbed or generated at the contact points in addition to Joule heating if an electric current flows through a circuit of two dissimilar conductors. The direction of the electric current defines which contact is heated or cooled. The cooling rate depends on the electrical current while the direction of the pumped heat can be reversed simply by switching the direction of the electric current.

The global Petlier Solid State Heat Pumps market size was estimated at USD 1229.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
