## Abstracts

Petrol station POS software is a sales point management system specifically designed for petrol stations to improve transaction processing efficiency and customer payment experience. This software is typically integrated into the cash register system of petrol stations and supports multiple payment methods, such as cash, credit cards, and mobile payments. With Petrol Station POS Software, gas station attendants can quickly enter transaction information and complete payment processes, reducing customer wait times. Additionally, the software records transaction data in real-time, providing accurate sales statistics and financial reports for petrol stations. Furthermore, Petrol Station POS Software supports member management functions, facilitating member rewards, coupons, and other marketing activities for petrol stations, thereby enhancing customer loyalty. In the future, gas station POS software will continue to evolve towards cloud-based and platform-based architectures, increasingly adopting SaaS deployment models to achieve centralized management of multiple sites across regions. Mobile payment, contactless payment, and self-service terminals will be deeply integrated into POS systems, providing drivers with a smoother, integrated experience for refueling, shopping, and payment. Secondly, POS systems will upgrade from "cash register tools" to "operational hubs." They will be integrated with tank monitoring, fuel dispenser control, convenience store inventory, membership, and marketing systems to achieve comprehensive business linkages including fuel, convenience stores, and car washes/repairs. Detailed analysis of license plates, vehicle identification numbers (VINs), and member profiles will help gas stations achieve differentiated pricing and precise promotions. The future market will also place greater emphasis on safety and compliance, as well as support for new energy businesses. POS systems must meet the tax control, payment security, and data privacy regulations of various countries, supporting electronic invoices and cross-border settlements. Simultaneously, with the increase in new energy stations such as charging piles and hydrogen stations, POS

software will expand into "integrated energy station operation systems," achieving unified billing, settlement, and membership management for oil, electricity, and gas, creating a new competitive advantage.

The global Petrol Station POS Software market size was estimated at USD 533.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
