Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pets Rabies Vaccine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pets Rabies Vaccine is used to prevent rabies, a deadly virus that attacks the brain and spinal cord in mammals, including dogs and humans. It's an incurable virus once symptoms appear, making vaccination critical for prevention. Unlike traditional veterinary vaccines, large-scale breeding is more sensitive to vaccine prices. With the improvement of the domestic socioeconomic level, the status of pets in people's minds has gradually become "humanized" for pet owners, and pet owners pay great attention to the health of their pets. Therefore, high-quality pet vaccines will be favored by pet owners and will also be the future development direction of pet health care consumption. In 2020, the total batch issuance data of rabies vaccines for animals in China was only 25 million, and there was a gap of 55 million in the rabies vaccine market for urban animals. The key factors driving the development of the market include people's increasing awareness of common infectious diseases, increased vaccination rates of stray animals, and the government's efforts to eliminate rabies by 2030. One of the main factors driving the animal rabies vaccination market is the awareness and education of livestock vaccines. There are many vaccines approved for livestock, including inactivated virus vector products, modified virus vector products, intramuscular injection products, subcutaneous injection products, 1-3 years of immunization period products, and minimum immunization age products. Regular public education, responsible pet ownership, regular veterinary treatment and vaccination, and ongoing professional training are important components of rabies prevention and control. Raising awareness of avoiding contact with wild animals and vaccinating wild animals for consumption can greatly help curb the spread of wild animal infections by

popularizing knowledge about the routes of rabies infection and other issues. In addition, vaccination improves the overall health of livestock and reduces all-cause mortality.

The global Pets Rabies Vaccine market size was estimated at USD 527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
