Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PEX-AL-PEX Tubing competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PEX-AL-PEX Tubing is a five-layer co-extruded composite pipe, consisting of an inner cross-linked polyethylene layer, an aluminum oxygen barrier layer, and an outer cross-linked polyethylene layer bonded together with hot-melt adhesive. Its core characteristic is the combination of the rigidity of metal pipes and the corrosion resistance of non-metal pipes, with a linear thermal expansion coefficient of only 0.026mm/m²K, approximately 80% lower than pure plastic pipes, effectively eliminating thermal expansion and contraction deformation issues. The aluminum layer provides shape memory effect, allowing the pipe to hold its bend without springback, while also blocking oxygen permeation (oxygen transmission rate $0.01\text{g/m}^2\text{day}$), effectively preventing corrosion of metal components in heating systems. This product has become a mainstream choice in radiant floor heating, domestic hot/cold water, and gas supply applications, particularly suited for high-rise buildings with stringent requirements on system lifespan and stability. According to industry data, the global PEX-AL-PEX tubing market reached approximately \$1,366 million in 2024, with annual sales of about 443,500 kilometers at an average price of \$3.08 per meter. Constrained by the precision of aluminum strip longitudinal welding and polymer co-extrusion speed, the annual production capacity of a single line ranges from 800 to 1,200 kilometers. Industry gross margins remain between 18% and 25%, as aluminum and specialized high-density polyethylene materials constitute a high proportion of costs.

The global PEX-AL-PEX Tubing market size was estimated at USD 1366.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50%

during the forecast period.
