Abstracts

PFA plastic rods are rod-shaped products made from PFA (Perfluoroalkoxy) material, inheriting the excellent properties of PFA, such as high-temperature resistance (capable of long-term use at 260°C), chemical corrosion resistance, electrical insulation, low friction coefficient, and high transparency. PFA rods are flexible, mechanically strong, and nearly inert to almost all chemicals, making them suitable for manufacturing corrosion-resistant parts, seals, insulators, and components in high-purity fluid handling systems. Due to their outstanding performance, PFA rods are widely used in industries such as semiconductors, chemicals, medical, and food processing, particularly in demanding environments.
