Abstracts

PFAS free barrier coating is an environmentally friendly coating material that does not contain per- and polyfluoroalkyl substances (PFAS). PFAS are synthetic organic compounds widely used in various coating materials due to their excellent waterproof, greaseproof, and stain-resistant properties. However, PFAS pose potential risks to the environment and human health, prompting the development of PFAS Free Barrier Coatings as a current priority. These coating materials are typically made from natural or renewable raw materials and exhibit excellent barrier properties and environmental performance. They effectively prevent the penetration of moisture, grease, stains, and other substances while maintaining the breathability and flexibility of packaging materials. The application of PFAS Free Barrier Coatings not only helps reduce PFAS pollution and protect the ecological environment but also enhances product safety and sustainability. With increasingly stringent environmental regulations and heightened consumer awareness of environmental issues, PFAS Free Barrier Coatings have broad application prospects in packaging, textiles, construction, and other fields.

The global PFAS Free Barrier Coating market size was estimated at USD 1437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
