Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PFAS-free Refrigerants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PFAS-free refrigerants refer to a refrigerant that does not contain perfluoro and polyfluoroalkyl Substances (PFAS). These refrigerants chemically avoid the use of fluorine-containing POPs to reduce potential harm to the environment and human health. Due to its environmental protection, low toxicity and sustainability, PFAS-free refrigerants are gradually replacing traditional PFAS-containing refrigerants. The PFAS-free refrigerants in this report mainly include hydrocarbon refrigerant (such as R-290, R-1270, R-600a, R600, R601a, and R601), ammonia refrigerant (R717), CO2 refrigerant (R744), and others (such as R704, R720, R728, RE170, R50, R1150, etc.). Global regulations on environmental and health safety are becoming increasingly stringent, especially regulations restricting the use of PFAS, which has prompted the refrigerant market to accelerate the transition to PFAS-free products and drive the rapid growth of demand for PFAS-free refrigerants. As consumers become more environmentally conscious, their demand for sustainable, green products is growing, supporting the development of PFAS-free refrigerants. Traditional PFAS-containing refrigerants are gradually being phased out, and the market demand for PFAS-free alternatives with comparable performance and environmental protection is growing. Many PFAS-free refrigerants, such as hydrocarbons, are flammable and require high safety during use and storage, which limits their scope of application. Most existing refrigeration equipment is designed for traditional refrigerants. Switching to PFAS-free refrigerants requires redesigning or adjusting the system, which increases costs and complexity. The regulations and standards for PFAS-free refrigerants vary greatly from country to country, affecting the consistent promotion and adoption in the global market.

The global PFAS-free Refrigerants market size was estimated at USD 403.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.80% during the forecast period.
