Report Overview:

PFAS remediation refers to the process of removing or reducing per- and polyfluoroalkyl substances (PFAS) from contaminated soil, water, or other environmental media. PFAS are a group of man-made chemicals that have been widely used in various industrial and consumer products, including firefighting foams, non-stick cookware, and waterproof clothing. Due to their persistence and potential health risks, PFAS have become a significant environmental concern. PFAS remediation techniques include physical, chemical, and biological methods, such as activated carbon filtration, ion exchange, and bioremediation. The goal of PFAS remediation is to protect human health and the environment by reducing exposure to these harmful chemicals.
