Report Overview

A Patent Foramen Ovale (PFO) closure device is a medical device used to treat a patent foramen ovale, a congenital heart defect where a small opening between the upper chambers of the heart (the atria) fails to close after birth. This device is typically implanted through a minimally invasive catheter procedure to seal the opening, preventing abnormal blood flow between the atria. By closing the PFO, the device reduces the risk of complications such as stroke or migraines. It is usually made of a metal framework covered with biocompatible materials, ensuring safety and effectiveness in restoring normal circulation.
