Abstracts

A Patent Foramen Ovale (PFO) closure device is a medical device used to treat a patent foramen ovale, a congenital heart defect where a small opening between the upper chambers of the heart (the atria) fails to close after birth. This device is typically implanted through a minimally invasive catheter procedure to seal the opening, preventing abnormal blood flow between the atria. By closing the PFO, the device reduces the risk of complications such as stroke or migraines. It is usually made of a metal framework covered with biocompatible materials, ensuring safety and effectiveness in restoring normal circulation. The key drivers of the Patent Foramen Ovale (PFO) closure device market is the rising prevalence of stroke and related cardiovascular conditions. Since a PFO increases the risk of stroke, particularly cryptogenic stroke, there is growing demand for minimally invasive treatments to address this condition. Technological advancements in medical devices and increased awareness of PFO-related risks have led to a higher adoption rate of closure devices. Additionally, the growing aging population, which is more susceptible to heart-related disorders, further fuels the demand for PFO closure procedures. Despite the increasing demand, the PFO closure device market faces significant challenges, primarily the high cost of devices and procedures. This can limit accessibility, particularly in developing regions where healthcare infrastructure and insurance coverage may be lacking. Another challenge is the risk of complications or adverse events associated with PFO closure procedures, such as device embolization or atrial fibrillation. Concerns over long-term safety and the need for more extensive clinical studies may hinder wider acceptance and regulatory approvals in certain markets. Abbott is the market leader with a market share of 80%

The global PFO Occluder Device market size was estimated at USD 150.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60%

during the forecast period.
