## Abstracts

Perfluoropolyether (PFPE) based lubricants are a class of high-performance lubricants composed of perfluoropolyether compounds. These compounds contain only carbon (C), fluorine (F) and oxygen (O) elements in their molecular structure, giving them excellent chemical inertness, high and low temperature resistance and oxidation resistance. PFPE lubricants remain stable over a wide temperature range of -70°C to 300°C and are non-flammable, making them suitable for harsh chemical environments. In addition, they are compatible with most plastics and elastomers and are widely used in fields that require high reliability and long life.

The global PFPE Based Lubricants market size was estimated at USD 751.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
