Abstracts

A pH indicator is a generic term for organic dyes that change color with changes in pH. They are also called acid-base indicators or neutralizing indicators. The pH at which the reaction that changes the structure of the indicator occurs differs depending on the indicator. Therefore, it is important to select an indicator that matches the pH range to be checked. Phenolphthalein, which changes colors in basic solutions, is a typical pH indicator. Most pH indicators are often used in R&D and production in the manufacturing industry and are also used to check the pH of crops and soil. In addition, pH indicators have long been used in school education, such as science classes, because of their large color change and ease of use.

The global pH Indicator market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
