Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on pH and ORP Electrode Storage Solution competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The pH and ORP electrode storage solution is a solution specially used to maintain the activity of the electrochemical sensor, which can prevent the electrode from drying, the glass membrane from aging, and the reference electrolyte from crystallizing. The pH electrode storage solution is usually a 3-4 mol/L KCl solution (containing a buffer), while the ORP electrode requires an antioxidant electrolyte (such as KNO₃ or a special inert solution). The storage solution can extend the life of the electrode (by 30-50%) and ensure measurement stability (the startup response time is shortened by 20%).

The global pH and ORP Electrode Storage Solution market size was estimated at USD 121.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global pH and ORP Electrode Storage Solution market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
