Report Overview:

Hyaluronic acid is a naturally occurring substance that helps retain moisture in the skin and eyes and lubricates the joints. Pharma-Grade Hyaluronic Acid is generally used in pharmaceutical formulations, such as Injection Product and Eye Drops for osteoarthritis of the knee joint. Hyaluronic acid also called hyaluronan, is an anionic, nonsulfated glycosaminoglycan distributed widely throughout connective, epithelial, and neural tissues. It is unique among glycosaminoglycans in that it is nonsulfated, forms in the plasma membrane instead of the Golgi apparatus, and can be very large: human synovial HA averages about 7 million Da per molecule, or about 20000 disaccharide monomers, while other sources mention 3–4 million Da. As one of the chief components of the extracellular matrix, hyaluronan contributes significantly to cell proliferation and migration, and may also be involved in the progression of some malignant tumors.

The Global Pharma-Grade Hyaluronic Acid Market Size was estimated at USD 90.60 million in 2023 and is projected to reach USD 163.14 million by 2029, exhibiting a CAGR of 10.30% during the forecast period.
