Report Overview:

In pharmaceutical manufacturing, fill-finish operations are critical, since fill-finish is the last step before a product is packaged and ultimately delivered to the patient. By the time a drug reaches this stage, the drug product is highly valuable, as it has already been through labor- and cost-intensive production stages, including upstream processing, cell culture or fermentation and downstream purification. Failures in the integrity of the fill-finish stage can introduce microbial contamination and generate issues with formulation and dosing.
