Abstracts

Pharmaceutical co-packing refers to the specialized outsourcing service where a third-party provider, known as a co-packer, is contracted by pharmaceutical companies to handle the final stages of product packaging and labeling, ensuring compliance with stringent regulatory standards such as those set by the FDA, EMA, and other global health authorities. This process typically includes blister packaging, bottle filling, cartoning, serialization, aggregation, and the application of tamper-evident or child-resistant features, all while adhering to Good Manufacturing Practices (GMP) to guarantee product integrity, traceability, and patient safety. By leveraging co-packing services, pharmaceutical firms can optimize their supply chains, reduce operational costs, accelerate time-to-market, and focus on core competencies like research, development, and marketing, while the co-packer manages the complex, capital-intensive packaging requirements tailored to diverse product formats, from tablets and capsules to injectables and topical formulations.
