## Abstracts

The Pharmaceutical Formulation Development Service is a systematic scientific research and technological development process whose core goal is to transform a bioactive pharmaceutical ingredient (API) into a safe, effective, and stable final dosage form suitable for industrial production and patient use. This service begins with in-depth characterization of the API's physicochemical properties, followed by scientific dosage form design and screening based on the target product's therapeutic needs, route of administration, and patient compliance. The development process encompasses key steps such as pre-formulation studies, excipient compatibility testing, formulation design and optimization, formulation process development, and pilot scale-up. Its core mission is not only to determine the optimal ratio of the active ingredient and various pharmaceutical excipients, but also to establish a robust and reliable manufacturing process and ensure that the final product meets predetermined quality standards, including key indicators such as dissolution, content uniformity, stability, and bioavailability. The entire development process strictly adheres to Quality by Design (QbD) principles and Good Manufacturing Practices (GMP) regulations, ultimately delivering a technical package including an optimized formulation, a mature process, quality control methods, and a comprehensive development report, providing critical support for subsequent production of the drug for clinical research and regulatory submission.

The global Pharmaceutical Formulation Development Service market size was estimated at USD 1420.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
