Abstracts

Pharmaceutical freezing drying equipment is specialized machine used in the pharmaceutical industry to remove moisture from sensitive biological products, such as vaccines, antibodies, and drugs. The process involves freezing the product at low temperatures and then subjecting it to a vacuum environment, where the frozen water is directly converted into vapor, bypassing the liquid state, in a process called sublimation. This helps to preserve the integrity and efficacy of the pharmaceutical products while extending their shelf life.

The global Pharmaceutical Freezing Drying Equipment market size was estimated at USD 820.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
