Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pharmaceutical Grade Sodium Benzoate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sodium benzoate is the sodium salt of benzoic acid, which has the effect of preventing spoilage and sourness, and extending shelf life. Sodium benzoate is a white particle, odorless or slightly fragrant, with a slightly sweet taste, astringency, and easy solubility in water. Its pH value is around 8. Sodium benzoate, as a preservative, is commonly used in formulations of liquid drugs, oral solutions, oral tablets, and injections. It can inhibit the growth of bacteria and fungi, thereby extending the shelf life of drugs. Adding sodium benzoate to certain drugs can increase their solubility and also enhance their absorption in the body. The most classic drug is sodium benzoate and caffeine, with a ratio of 1:1. Caffeine has an excitatory effect on the nervous system, while sodium benzoate not only has a solubilizing effect but also increases the solubility of caffeine by 50 times, promoting absorption in the human body. A certain concentration of sodium benzoate solution can increase the solubility of furazone to around 1:3000.

The global Pharmaceutical Grade Sodium Benzoate market size was estimated at USD 86.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
