Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pharmaceutical Hydrocarbon Solvents competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pharmaceutical hydrocarbon solvents are high-purity liquid hydrocarbons (mainly pharma-grade n-hexane, n-heptane, isoparaffins and medicinal white mineral oils) refined from crude-oil or GTL streams by deep hydrotreating and dearomatisation to meet USP/EP/JP and ICH Q3C requirements, and used as process solvents and excipients in API extraction, crystallisation, purification, equipment cleaning and ointment/soft-capsule bases. Supply is concentrated in a small group of integrated refiners and specialty oil producers, with global effective pharma-grade capacity only a tiny fraction of total white-oil/solvent capacity; typical ex-works prices are roughly on the order of USD 1,500-3,000/t depending on cut, purity and documentation package, and gross margins for established producers are usually in the 15-30% range, higher for niche pharma-only grades with stricter specifications and smaller batch sizes.

The global Pharmaceutical Hydrocarbon Solvents market size was estimated at USD 625.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
