Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pharmaceutical Micro-Pellet Core competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Pharmaceutical Micro-Pellet Core is a commonly used drug carrier in the pharmaceutical industry, particularly in the formulation of oral medications designed for controlled or extended-release purposes. These micro-pellet cores encapsulate the active pharmaceutical ingredient (API) in small particles, enabling a controlled release of the drug over a prolonged period, which enhances therapeutic efficacy and reduces side effects. The outer layer of the micro-pellet core may consist of a coating that protects the drug from gastric acid and ensures targeted release in the appropriate section of the gastrointestinal tract. Pharmaceutical micro-pellet cores are widely used in the formulation of various drugs such as antibiotics, vitamins, and anticancer agents to improve bioavailability and patient compliance. The global production of pharmaceutical micro-pellet cores is 49,800 tons, with an average price of 7,150 USD per ton.

The global Pharmaceutical Micro-Pellet Core market size was estimated at USD 356.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
