Abstracts

Pharmaceutical rigid films are specialized plastic materials designed for use in pharmaceutical packaging applications. These films are typically made from materials such as polyvinyl chloride (PVC), polypropylene (PP), or polyethylene terephthalate (PET), often combined with additional layers or coatings to enhance properties like barrier resistance, durability, and compatibility with medications. They provide structural rigidity, ensuring the safe storage and transport of pharmaceutical products such as tablets, capsules, and blister packs. These films are engineered to meet stringent regulatory standards for safety, quality, and protection against environmental factors like moisture, oxygen, and light, thereby preserving the efficacy and shelf life of the medicines they enclose.

The global Pharmaceutical Rigid Films market size was estimated at USD 2527.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
