Abstracts

Pharmaceutical Starch is an abundantly available natural resource and preferred excipient for drug delivery systems in pharmaceutical solid dosage forms. It is commonly used as a filler, binder, or coating in the drug manufacturing industry. Starches are typically derived from corn or potato. Starches are used in the pharmaceutical industry for a wide variety of reasons, such as an excipient, a tablet and capsule diluent, a tablet and capsule disintegrant, a glidant, or as binder. Disintegrants enable tablets and capsules to break down into smaller fragments (dissolve) so that the drug can be released for absorption. Starches also absorb water rapidly, allowing tablets to disintegrate appropriately. There are many players in the market, Tereos, Cargill, Roquette, Visco Starch, Colorcon and others are playing important roles in Pharmaceutical Starch industry. Top 5 players occupied about 15.29% market revenue share, The market is not concentrated for now and is still to be dispersed.

Pharmaceutical starch is widely used as a binding and disintegrating agent for tablets, pills and granules, also used as filler for capsules. By application, Tablets is the largest consumer group, with consumption market share of 57%. Then followed by the Capsule which account for 22.3%.
