Abstracts

Pharmaceutical surfactants are amphiphilic compounds that lower surface tension between two liquids or between a liquid and a solid, serving as essential excipients in drug formulations to enhance solubility, stability, bioavailability, and absorption of active pharmaceutical ingredients (APIs). These substances are categorized based on their charge?nonionic, anionic, cationic, or amphoteric?and are tailored for specific applications, including solubilizing poorly water-soluble drugs, emulsifying lipid-based formulations, stabilizing suspensions and emulsions, and improving drug delivery through membranes in oral, topical, parenteral, and pulmonary dosage forms. Their critical role in modern pharmaceutical development stems from the increasing prevalence of hydrophobic APIs and the demand for advanced drug delivery systems that ensure efficacy, safety, and patient compliance.

The global Pharmaceutical Surfactants market size was estimated at USD 1268.9 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
