Abstracts

A phase change immersion cooling system is a cooling solution that combines immersion cooling technology with phase change materials to dissipate heat. This system immerses equipment in a liquid, taking advantage of the liquid's ability to absorb or release heat during phase transitions (e.g., from liquid to gas). The phase change process helps absorb the heat generated by the equipment, effectively reducing the temperature and enhancing overall thermal management efficiency.

The global Phase Change Immersion Cooling System market size was estimated at USD 3840.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.10% during the forecast period.
