Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phase Change Material (PCM) Pack competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Phase Change Material (PCM) Pack refers to a device or material system designed to absorb, store, and release thermal energy during the process of changing its physical state, typically between solid and liquid. These packs utilize the latent heat absorbed or released during phase transitions to maintain a consistent temperature within a specific range. PCM packs are widely used in various applications such as temperature-controlled shipping, building temperature regulation, and thermal energy storage systems. Their ability to manage and stabilize temperature fluctuations makes them valuable for improving energy efficiency and maintaining optimal conditions in diverse environments. The Phase Change Material (PCM) pack industry is currently experiencing several significant trends. One of the most prominent is the increasing focus on sustainability. As environmental concerns grow globally, there is a strong push for PCM packs to be made from eco-friendly and recyclable materials. This not only aligns with consumer preferences for greener products but also meets the more stringent environmental regulations being imposed in many regions. For instance, companies are exploring bio-based PCMs that can reduce the reliance on fossil fuels and minimize the carbon footprint of the production process. Another key trend is the expansion of applications. PCM packs were initially mainly used in specific niches like some industrial thermal management and a few high - end temperature - controlled packaging. However, they are now penetrating a much wider range of sectors. In the healthcare sector, PCM packs are being used more frequently for transporting temperature - sensitive medical products like vaccines and biologics, ensuring their integrity during transit. The electronics industry is also showing interest, with PCM

packs being considered for thermal management in devices like laptops and smartphones to prevent overheating and improve performance.

The global Phase Change Material (PCM) Pack market size was estimated at USD 502.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
