Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phenol-Free Phosphite Antioxidant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Phenol-free phosphite antioxidants are a type of phosphite antioxidant that does not contain phenolic structures. They are used as auxiliary antioxidants in polymer materials, decomposing hydroperoxides, capturing free radicals, improving color, and enhancing processing stability. They synergistically enhance the thermal aging resistance of polymers and provide excellent stability and environmental performance without phenolic components. This is particularly important for products with safety requirements, such as food contact materials. Global production in 2024 is expected to be approximately 45,000 tons, with an average selling price of US\$3,390 per ton.

The global Phenol-Free Phosphite Antioxidant market size was estimated at USD 153.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
