Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phenolic Fiber Reinforced Composite Film competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Phenolic fiber reinforced composite film is a film material that is reinforced with phenolic fiber and composited with a resin matrix (such as phenolic resin, epoxy resin, etc.) through a specific process. Its core is to use the three-dimensional cross-linked structure and flame retardant properties of phenolic fiber, combined with the formability and mechanical properties of the resin matrix, to form a new composite material with multiple functions. Phenolic fiber has a high carbon content and an oxygen index of 30%~34%. It self-extinguishes and emits little smoke when burned, and the carbonization rate is 50%~60%, giving the composite film excellent fireproof properties. The fiber maintains a stable shape under instantaneous high temperature and has a low thermal conductivity, which is suitable for the insulation needs of high temperature environments.

The global Phenolic Fiber Reinforced Composite Film market size was estimated at USD 549.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
