Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phenolic Rubber Antioxidants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Phenolic rubber antioxidants are a vital class of stabilizers that can be categorized into alkylated phenols, substituted monobasic phenols, polyhydric phenols, and sulfurized disubstituted phenols. Typical representatives include 2,2?-methylenebis(6-tert-butyl-4-methylphenol) (antioxidant 2246), 2,6-di-tert-butyl-4-methylphenol (BHT or antioxidant 264), and styrenated phenol (antioxidant SP). Among them, antioxidant 2246 offers excellent protection against rubber aging caused by heat, oxygen, and metal ions. While the phenolic antioxidants' efficiency is slightly lower than amine types due to hydrogen atoms readily reacting with atmospheric oxygen, their low discoloration effect makes them especially suitable for use in light-colored rubber products. As such, they are widely applied in rubber items requiring good appearance and stability, such as cables, medical rubber, and latex goods.

The global Phenolic Rubber Antioxidants market size was estimated at USD 231.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Phenolic Rubber Antioxidants market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
