Abstracts

Phenoxyacetic acid herbicides are a class of organic compounds containing phenoxyacetic acid groups in their structures. They are selective hormone-type herbicides that disrupt the normal growth process of weeds by simulating the mechanism of action of plant growth hormones (such as auxin), causing them to become deformed, grow out of control, and eventually die. This type of herbicide has a significant effect on broadleaf weeds and is widely used in weed control in crop fields such as wheat, corn, and rice, as well as lawns and non-arable land. Representative varieties include 2,4-D and MCPA.

The global Phenoxyacetic Acid Herbicides market size was estimated at USD 508.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
