Report Overview

Phenyl Chlorosilane, including new special monomers such as phenyl tri Chlorosilane and diphenyl Dichlorosilane, is one of the main raw materials for synthetic silicone rubber, phenyl silicone oil and phenyl silicone resin. It can also be used to produce phenyl intermediates, which play a significant role in improving the high and low temperature resistance, weather resistance, radiation resistance and other aspects of the product. Its amount and importance in organic silicon monomer are only second to methyl chlorosilane. From the perspective of product application, phenyltrichlorosilane and diphenyl Dichlorosilane can be used as cross-linking agent and chain extender in phenyl deep processing products to prepare phenyl silicone oil, phenyl silicone resin, phenyl silicone rubber and other products. In particular, diphenyl Dichlorosilane has some special applications in aerospace, electrical electronics, nuclear industry and other fields.
