## Abstracts

Phosphated steel wire is a steel wire product that forms a layer of phosphating film on the surface of steel wire through chemical treatment. Phosphating treatment usually involves immersing steel wire in a solution containing phosphate, and generating a water-insoluble phosphate film on the surface of the steel wire through chemical reactions. This layer of membrane has a porous structure, which can significantly improve the wear resistance, corrosion resistance, and adhesion performance of steel wire with materials such as rubber and plastic.

The global Phosphated Steel Wire market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
