Report Overview

Phosphatidylserine (PS) is a phospholipid compound naturally found in cell membranes, particularly in the brain, where it plays a crucial role in cognitive functions such as memory, focus, and stress regulation. It is widely used as a dietary supplement to support brain health, particularly in aging populations, and is also incorporated into functional foods and pharmaceuticals. The market for phosphatidylserine has seen steady growth due to increasing consumer awareness of cognitive health, rising demand for nootropic supplements, and its applications in sports nutrition for reducing exercise-induced stress. Key sources include soy-derived and sunflower-derived PS, with sunflower-based products gaining traction due to allergen-free and non-GMO preferences. Regulatory approvals, such as FDA GRAS status and EFSA health claims, further bolster market expansion, though high production costs and limited natural sourcing remain challenges. Geographically, North America and Europe dominate demand, while Asia-Pacific shows rapid growth driven by aging populations and rising disposable incomes. The competitive landscape includes major players like Chemi Nutra, Lipoid GmbH, and Enzymotec, focusing on innovation and strategic partnerships to strengthen market presence.

The global Phosphatidylserine market size was estimated at USD 91.77 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
