Abstracts

Phosphite antioxidants are a class of organophosphorus compounds widely used as secondary antioxidants in polymer stabilization, functioning primarily as hydroperoxide decomposers to prevent oxidative degradation during processing and extend the service life of materials such as plastics, rubber, adhesives, and synthetic fibers. Their role is complementary to primary antioxidants like hindered phenols, with which they are often synergistically blended to enhance thermal stability, color retention, and mechanical integrity in products ranging from packaging films and automotive parts to electrical insulation and construction materials. Key commercial variants include tris(nonylphenyl) phosphite (TNPP), tris(2,4-di-tert-butylphenyl) phosphite (IRGAFOS 168), and diphenyl isodecyl phosphite, each selected based on compatibility, hydrolytic stability, regulatory compliance, and specific performance requirements in diverse polymer matrices.

The global Phosphite Antioxidants market size was estimated at USD 210.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
