Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phosphite Rubber Antioxidants competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Phosphite rubber antioxidants function as hydroperoxide decomposers and free-radical scavengers, serving as essential auxiliary antioxidants in polymer systems. Typical compounds include tris(nonylphenyl) phosphite (TNP), tris(1,2,2,6,6-pentamethylpiperidinyl) phosphite (GW-540), and tris(2,4-di-tert-butylphenyl) phosphite (Irgafos168). GW-540 is widely used in tire formulations containing styrene-butadiene rubber and polybutadiene rubber, while TNP is suitable for natural rubber, synthetic rubber, latex, and plastic products. These phosphite antioxidants provide excellent thermal stability to rubber products and do not affect their color or gloss. When used in combination with phenolic or amine antioxidants, they significantly enhance the overall antiaging performance of rubber materials.

The global Phosphite Rubber Antioxidants market size was estimated at USD 97.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
