Report Overview

A phospho-specific antibody is an antibody that specifically binds to the phosphorylation site of a phosphorylated protein. In cells, protein phosphorylation modification is an important post-transcriptional modification, which can regulate protein activity, stability, interactions, etc., and participate in the regulation of various biological processes. Phospho-specific antibodies have the ability to highly specifically recognize specific phosphorylation sites and can be used to detect and quantify the expression levels of phosphorylated proteins in samples, thereby revealing the activity and regulatory mechanisms of cell signaling pathways.
