Abstracts

Photo-imageable solder mask, often referred to as solder resist or solder mask, is a specialized protective coating applied to the surface of printed circuit boards (PCBs) during the PCB manufacturing process. The global electronics manufacturing industry was experiencing substantial growth due to increased demand for consumer electronics, automotive electronics, IoT devices, and 5G technology. This growth had a direct impact on the solder mask market as PCBs are essential components of electronic devices. Environmental regulations and consumer demand for environmentally friendly products were driving the adoption of lead-free solder masks in PCB manufacturing. These masks comply with regulations such as the Restriction of Hazardous Substances (RoHS). The Asia-Pacific region, particularly China, remained a dominant force in the global solder mask market due to its significant role in electronics manufacturing.

The global Photo-Imageable Solder Mask market size was estimated at USD 1048.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
